Multichoice DVB S2 Migration

24 June 2013

Multichoice will be migrating the following 3 transponders from DVB S to DVB/S2 in July:

Transponder 17K - 11,554 MHz (Vertical)

Transponder 16K - 11,514MHz (Horizontal)

Transponder 18K - 11,554 MHz (Horizontal)

The proposed date for the switch-over is set for the 1 July at 00:01.

Please note, this migration will affect HDPVR decoders and action will be required in SMATV installations only (Single Cable). No Head-end settings or hardware required, the only action required, is to update 2 existing network settings in the HDPVR menu. Single decoders require no action.

***No action required at domestic or Multi-switch installations. There may be a possibility that HDPVR decoders will require a re-boot, or a flash reset, if affected HD channels do not display.**

After the migration, the following 4 HD channels will not display until the network settings are updated:

1. M Showcase HD
2. M Action+ HD
3. M Family HD
4. M Comedy HD

No pre-emptive action can be done; settings can only be changed once the migration has been effected by Multichoice.

We will add updated information to our useful links section of our website

<http://www.spacetv.co.za/pages/useful-links.php>

Please keep checking for updates. If you are on facebook, like our page for current information, and updates on the run.

See below for complete settings, valid after S2 Migration. This information is shared in good faith and based on information received from Multichoice. For technical reasons, this migration may be delayed by Multichoice, dates and time in this document as received on date of writing.

For more information, contact us on 0861 40 41 42.

Regards

The Space Television Team
